

Caterpillar® Comfort Seats

Superior Operator Comfort

- Infinitely adjustable lumbar support. Mechanical controls distribute pressure over a broad area and provides added support on slopes.
- Backrest extension for superior upper back support.
- Dual locking fore and aft adjustment up to 160 mm (6.3 in.).
- Easy access controls at seat front. Operator controls height, weight and forward/reverse adjustments.
- Comfortable 3" wide automatic retractable seatbelt with minimized cinching.
- Seat side bolsters restrain side-to-side movement when operating on side slopes or in rough terrain.
- Thick contoured seat cushion with adjustable 10-15° tilt angle and rolled-down front edge puts less pressure on operators' thighs.
- Fully adjustable arm rest with flip-up feature when not in use.
- Eight different seat adjustments accommodate all operator sizes or weights.

Superior Ride -Toggle Link Air Suspension*

**Some features shown are optional*

- Integrated Height Adjuster
- Operator-controlled Ride Zone Indicator
- Adjustable Shock Damper
- Self-contained Air Compressor
- Heavy-duty Air Compressor
- Dual Shock Attachment for more demanding applications

New suspension design replaces the roller/channel with a link-based mechanism. Significantly reduces suspension looseness and provides increased seat stability, while eliminating premature roller wear.

Durability & Lower Cost

Gray/Black Fabric - Textured - "Slip Resistant"

Black Leather Grain Vinyl

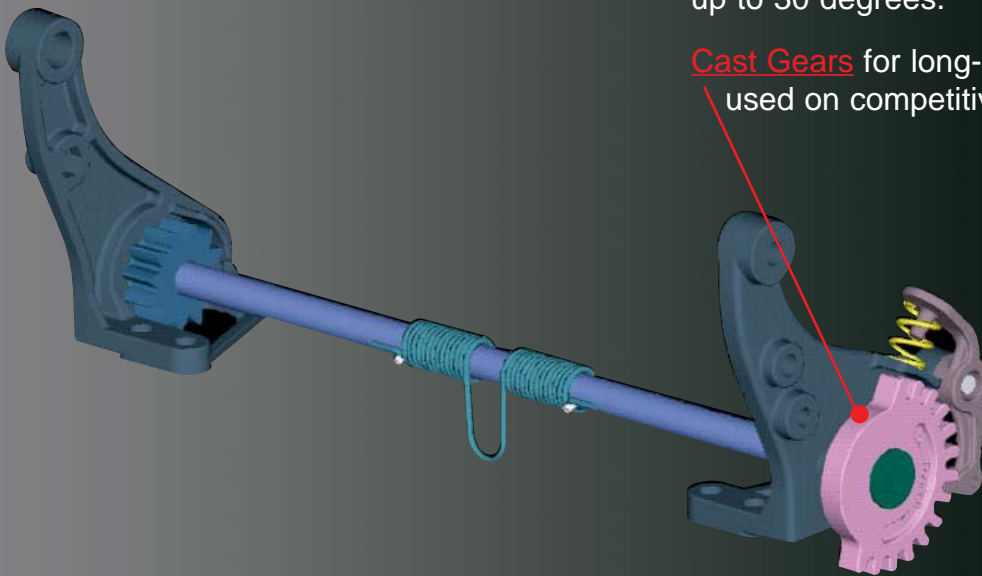

Brown Tweed Fabric Smooth

- Rugged, tight-weave fabric or leather grain vinyl seat. Upholstery is rip-resistant.
- Seat material contains a special backing, which is fused, not sewn, to the underside of the fabric. This allows for stretching of the material without sagging, providing a long-lasting sleek appearance.
- Cast, single piece, back pan design with supported seat side bolsters. Provides a more robust design for high hour applications versus the fabricated and tubular structure of competitor's seats.
- Comfort Seat and Toggle Link Suspension have fewer parts. Increased reliability and lower maintenance costs.
- Long-life Durability—Seat and suspension designed for 10,000-hour life.
- Durable Dual-locking Seat Back Recliner—adjustable up to 30 degrees.

Cast Gears for long-life durability—versus clutch type used on competitive seats.

- Over 40,000 hours of testing in rugged high hour off-highway applications, including 5,000 lb. in-cab seat belt pull tests.

The operator can feel the terrain and load on the machine through the seat. Superior operator comfort means increased productivity.

Caterpillar Comfort Seats can be retrofitted to selected models of Off-Highway Trucks, Large Track-type Tractors, Wheel Dozers and Wheel Loaders manufactured from 1990 to present with standard, Contour or other seats. See your Cat[®] Dealer for complete details.
