Release Number: EEPR0412

Cat® Dealer Mohamed Abdulrahman Al-Bahar and Caterpillar to Exhibit at Middle East Energy

PEORIA, IL – Cat® Dealer [Mohamed Abdulrahman Al-Bahar](#) and [Caterpillar Inc.](#) will be exhibiting at [Middle East Electricity](#), February 7-9, 2012. Held in Dubai, United Arab Emirates, Middle East Electricity is one of the region's largest trade shows dedicated to the power sector.

With the sustained growth of infrastructure and construction throughout the Gulf region, Al-Bahar has worked with hundreds of customers to design, supply and install integrated power solutions for both standby and prime power applications. The Middle East Electricity exhibition will be an opportunity to reconnect with existing customers and consulting-specifying engineers, as well as to discuss future projects. Visitors to the booth will be able to view the Cat 3516B generator set, which generates between 2000 and 2500 kVA at 50 Hz, and a Cat 60 kVA UPS.

Caterpillar offers a complete line of generator sets, containerized power modules and rental units to meet continuous or temporary needs. Representatives from Al-Bahar and Caterpillar will highlight the totally integrated single-source power solutions available from Caterpillar, such as UPS, switchgear, generator set controls and ATS. This simple system integration ensures that equipment is pre-configured to work together for optimum performance and supported by the global Caterpillar Dealer network. Cat gensets are designed to perform at ambient temperatures of 50 degrees Celsius (122 degrees Fahrenheit), meaning they can withstand the region's harsh summers.

Founded in 1937, Mohamed Abdulrahman Al-Bahar is one of the leading business houses in the Arabian Gulf. Headquartered in Sharjah, United Arab Emirates, Al-Bahar represents Caterpillar in Bahrain, Kuwait, Qatar, and United Arab Emirates, and in Oman through its associate, Oasis Trading and Equipment Co.

Al-Bahar and Caterpillar supply everything project engineers need to properly configure, install and operate power systems for small- and large-scale infrastructure projects – including utilities, telecom, hospitals, airports and railway – as well as many other applications. These resources include:

- Detailed product specifications and performance data with a comprehensive overview of product features and benefits.
- Expert sizing tools, drawings, interfacing and system integration.
- Cost and delivery estimates.
- Warranty, operations, maintenance and performance guarantees.

Caterpillar will be opening a new distribution center in Dubai this year, making it even easier to fulfill customer needs in the region.

Caterpillar has highlighted several of the customer applications from Al-Bahar's territory:

- [Dubai Metro](#) – Al-Bahar recently supplied the Cat generator sets that serve as standby power for the fully electric, driverless metro system. Al-Bahar also provides ongoing technical training on the operation and maintenance of the generator sets to Dubai Metro engineers and technicians.
- [American Hospital Dubai](#) – As one of the top hospitals in the Middle East, American Hospital Dubai depends on Cat generator sets for reliable backup power in case of an unexpected power outage. To ensure quality healthcare for all hospital patients, Al-Bahar configured a power system with Cat C175 generator sets and UPS systems to ensure no downtime.
- [Oman Mobile Telecommunications](#) – To support the growth of mobile telecommunications, Oman Mobile purchased more than 60 generator sets and signed a

long-term rental contract to provide continuous power and mobile service at its unmanned and remote locations across the country.

Mohamed Abdulrahman Al-Bahar and Caterpillar are located in Stand ZA30 at Middle East Electricity.
